

GLOVE HEATING IRONS

Professional finishing and seam inspection for glove production

Controlled finishing for consistent quality

Used at the end of the production process, these heated metal forms reduce wrinkles, improve the appearance of finished gloves and support reliable visual seam inspection. Standard forms cover common ladies' and men's sizes; special dimensions are made to order.

- Handmade in Germany
- Straight standard forms and anatomically curved custom forms
- Individual components or complete 48 V systems with electronic control unit

COMPLETE SYSTEM

Available with a suitable electronic 48 V control unit, holders, connecting cables and required connection components.

The configuration is selected according to glove type, size range and number of forms.

Available versions

Heating iron type	Version	Voltage	Power	Configuration
Piqué seam	Straight or anatomical*	48 V	140 / 160 W	One form per size and hand
Lasch seam / hand seam	Straight or anatomical*	48 V	140 / 160 W	One form per size for both hands
Thumb	Straight or anatomical*	48 V	60 W	One form per size for both hands

* Anatomically curved forms are made to order and adapted to the customer's gloves. One pair of sample gloves is required for each size.
